Use of topical corticosteroids in children should be limited to the least amount compatible with an effective therapeutic regimen. Since safe use of Mometasone furoate 0.1% in pregnant women has not been established, topical corticosteroids should be used during pregnancy, only if the potential benefit justifies potential risk to the fetus. It is not known whether topical administrations of corticosteroids could result in sufficient systemic absorption to produce detectable quantities in the breast milk, thus a decision should be made, whether to discontinue nursing or to discontinue the drug taking into account the importance of the drug to the mother. If irritation or sensitizations develop with the use of Momenta cream, treatment should be discontinued. Excessive or prolonged use of topical corticosteroid can suppress HPA axis, resulting in secondary adrenal insufficiency.

STORAGE
Store at 15ºC - 25ºC

DOSAGE AND ADMINISTRATION
Apply a thin film of Momenta cream to the affected skin areas once or twice daily.

COMPOSITION
Each gram of Momenta cream contains the active compounds Mometasone furoate 0.1%w/w, Miconazole nitrate 2% w/w and Gentamicin 0.1% w/w in a suitable cream base.

PROPERTIES
Pharmacology
Momenta cream contains Mometasone furoate, which is a synthetic medium potency corticosteroid, exhibits antiinflammatory, antipruritic and anti-allergic actions, Gentamicin which is a broadspectrum anti-bacterial agent against Gentamicin sensitive bacterial skin infections and Miconazole nitrate, which is a broad-spectrum antifungal agent against pathogenic fungi, including yeasts and dermatophytes.

INDICATIONS
Momenta cream is indicated in mixed infections of the skin with the fungi and bacteria. These include: atopic eczema, contact eczema, follicular eczema, infantile eczema, otitis externa, anogenital pruritis (pruritis ani/vulvae) nummular eczema, post traumatic infective eczema, seborrhoeic or flexural eczema, neurodermatitis and psoriasis.

CONTRAINdications
Momenta cream is contraindicated in patients, who are hypersensitive to any ingredients in this preparation.

SIDE EFFECTS
Extended, recurrent applications may increase the risk of contact sensitization.

PRECAUTIONS
Systemic absorption of topical corticosteroid will be increased, if extensive technique is used. Suitable precautions should be taken under these conditions or when long-term use is anticipated, particularly in infants and children.
